EDUCATION

Master of Physical Chemistry

June 2019

College of Science, Shanghai University

Thesis: “inkjet 3D printing microstructures from 316L powder”

Supervisor: Jianhui Fang

Bachelor of Processing and Molding of Polymers

June 2016

College of Materials, Zhengzhou University

Thesis: “Design and development of a vacuum hot-pressing apparatus”

Supervisor: Guoqiang Zheng

RESEARCH EXPERIENCE

Suzhou Institute of Nano-Tech and Nano-Bionics, Chinese Academy of Sciences

Assistant Research Fellow

June 2019 – Present

Key Laboratory of Multifunctional Nanomaterials and Smart Systems

- Introduced freezing and sublimation to direct inkjet printing processes to realize small feature size.
- Simulated the deposition and sublimation process of the printed droplets on low temperature substrate.
- Designed and fabricated a flat slit extrusion head to prepare long-range directed graphene oxide liquid crystals (GOLC).
- Created a 3D printing strategy based on stacking GOLC to prepare lightweight lamellar graphene aerogels (LGA).
- Explored the electromagnetic interference shielding and piezoresistive sensor applications of LGA.

Graduate Research Assistant

March 2017–June 2019

Printable Electronics Research Center

- Created a water-ethanol based binder system to print high resolution metal macro/micro-structure.
- Simulated the deposition and spread process of the printed droplets on metal powder surface.

ADDITIONAL SKILL

- 3D printing: Inkjet 3D Printing, Direct Ink Writing, Micro-stereolithography, Fused deposition modeling.
- Microfluidic, MEMS fabrication.
- 3D CAD software: SolidWorks, Pro/E.
- FEA software: COMSOL, Ansys Workbench.
- Data processing software: MATLAB, Origin.
- Individual and team work ability.
